In SGML, HTML and XML documents, the logical constructs known as character data and attribute values consist of sequences of characters, in which each character can manifest directly (representing itself), or can be represented by a series of characters called a character reference, of which there are two types: a numeric character reference and a character entity reference.

### **List of XML and HTML character entity references - Wikipedia**

[Bloque 1: #preambulo] La Directiva 1999/31/CE, del Consejo, de 26 de abril, relativa al vertido de residuos, establece un régimen concreto para la eliminación de los residuos mediante su depósito en vertederos.
