43 Chapter 3: Species of Greatest Conservation Need through October 2011, the criteria and list were re-evaluated resulting in a revised list of 1036

Chapter 3: Species of Greatest Conservation Need

The colossal squid (*Mesonychoteuthis hamiltoni*, from Greek mesos (middle), onycho (claw, nail), and teuthis ()), sometimes called the Antarctic squid or giant cranch squid, is believed to be the largest squid species in terms of mass. It is the only known member of the genus *Mesonychoteuthis*. It is known from only a few specimens, and current estimates put its maximum size at 12–14 m (39–46 ...

Colossal squid - Wikipedia

The signal crayfish (*Pacifastacus leniusculus*) is a North American species of crayfish. It was introduced to Europe in the 1960s to supplement the Scandinavian *Astacus astacus* fisheries, which were being damaged by crayfish plague, but the imports turned out to be a carrier of that disease. The signal crayfish is now considered an invasive species across Europe, Japan, and California ousting ...

The Animals at Risk from Climate Change educational poster presents a succinct overview of the fundamental impacts of greenhouse gases—the causes, effects and risks to all forms of life on the planet.. By highlighting 25 animals selected for their vulnerability to climate change, the complex interaction of biological traits and environmental conditions that cause a species to be susceptible ...

Animals at Risk from Climate Change - The Global Education

We're Hiring! November 30th, 2018: The Ministry of Environment, through the Saskatchewan Conservation Data Centre (SKCDC), in partnership with Nature Saskatchewan, require the services of a Managed Areas Biologist for a one-year term position, commencing in January 2019.

Saskatchewan Conservation Data Centre

Sunshine State gardeners have rediscovered the Florida coontie (Figure 1) as a native plant well adapted to Florida yards. Its increased use in landscapes has encouraged the presence of the rare atala butterfly, which uses coontie as a larval host plant.

ENH117/MG347: Florida Coonties and Atala Butterflies

Fig. 1. There are different needs and drivers for biodiversity monitoring at different scales, as exemplified in this diagram. We contend that when considering citizen science biodiversity monitoring it is essential to meet both the needs of participants (at the local level) and it is important to meet the needs of funders and data users (at the regional to global level).

A Vision for Global Biodiversity Monitoring With Citizen
