Assisted reproductive technology (ART) are medical procedures used primarily to address infertility. It includes procedures such as in vitro fertilization. It may include intracytoplasmic sperm injection (ICSI), cryopreservation of gametes or embryos, and/or may involve the use of fertility medication. When used to address infertility, it may also be referred to as fertility treatment.

Gonadotropin preparations are drugs that mimic the physiological effects of gonadotropins, used therapeutically mainly as fertility medication for ovarian hyperstimulation and reversal of anovulation. For example, the so-called menotropins consist of LH and FSH extracted from human urine from menopausal women. There are also recombinant variants.
